

Digital Assignment-1

CSE3002 - Internet and Web Programming

Name: KISHAN KUMAR SHARMA

Reg. No.: 19BCE2569

Slot: G2

Venue: SJT824

Faculty: Dr. JAYAKUMAR S.

Date: 24th November 2021

Github link: <https://github.com/kishan1468/IWP.git>

Github pages link: <https://kishan1468.github.io/IWP/>

Question.

Create a personal webpage using HTML5, CSS and JS. Commit every change in this GitHub Repository.

- **Write down the step-by-step process for creating the personal webpage and deployment in GitHub Pages.**

1. First we need to think what things we need to add for our personal webpage.
2. Then we need to design the webpage using HTML.
3. In html, in head section mention the links to refer for css and script, mention the title.
4. Then we design our home page which have the navigation links at top and a short description about ourself and a personal photo and button for more information about myself.
5. Then we design our 1st page which have introduction about me and a sample resume for download.
6. Then we design our 2nd page which contains the details of my skills.
7. Then we design 3rd page having my hobbies.
8. Then we design 4th page which shows my portfolio having education details and my projects.
9. Then we design 5th page which shows my image gallery.
10. Then we design our final page which contains my contact details and a contact box.
11. At last we design our footer having my social media links and a copyright.
12. Then we make our website look more beautiful by using CSS.
13. Then we write a javascript code to make our website responsive. Now our personal webpage is complete.
14. After that we need to deploy our webpage on GitHub. For that we need create a repository and then we need to push our files into GitHub.
15. Then we need to publish our website by changing settings in GitHub pages.

- **Write down the 10 points you learned during the creation of this webpage.**

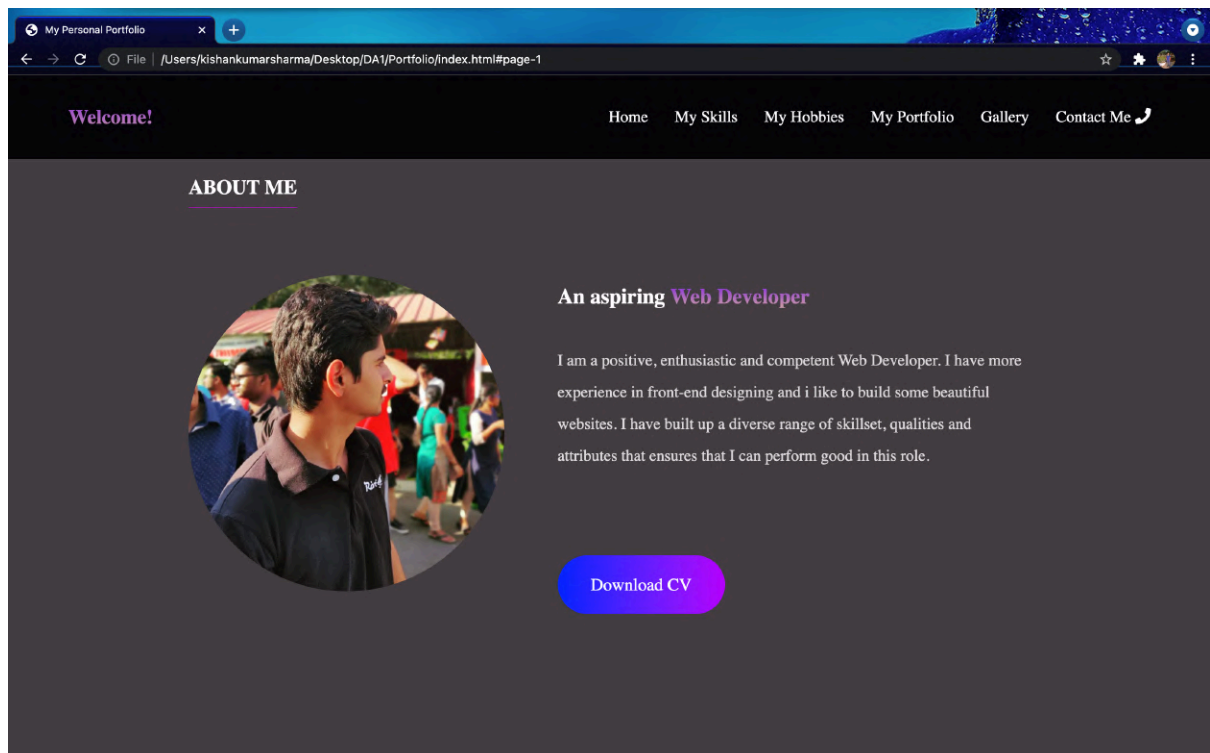

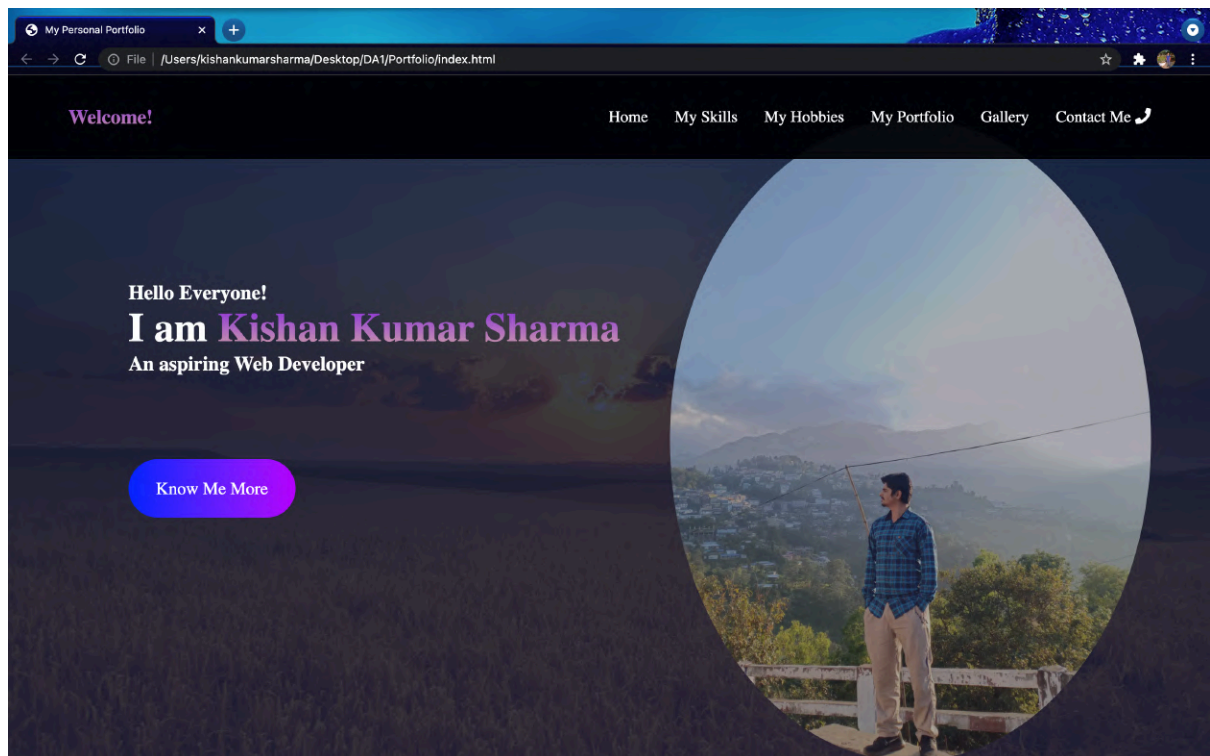

1. Creating a web page is interesting and totally worth it.
2. It helped me to learn that designing a website takes out all of your creativity.
3. It improves our analytical and creativity skills in us.
4. Our website should look beautiful. We can use font-awesome for good looks.
5. Our website should also be user friendly.
6. We need to adapt and learn new technology as it is not just about HTML, CSS and JS.

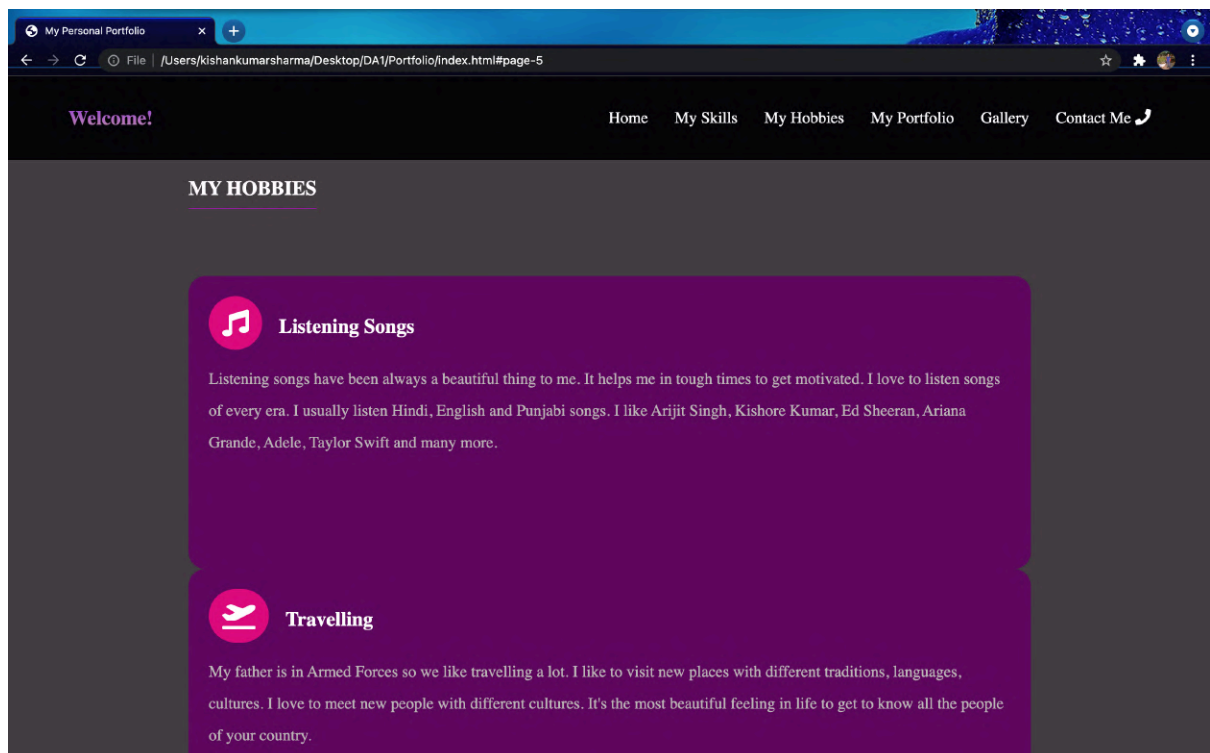

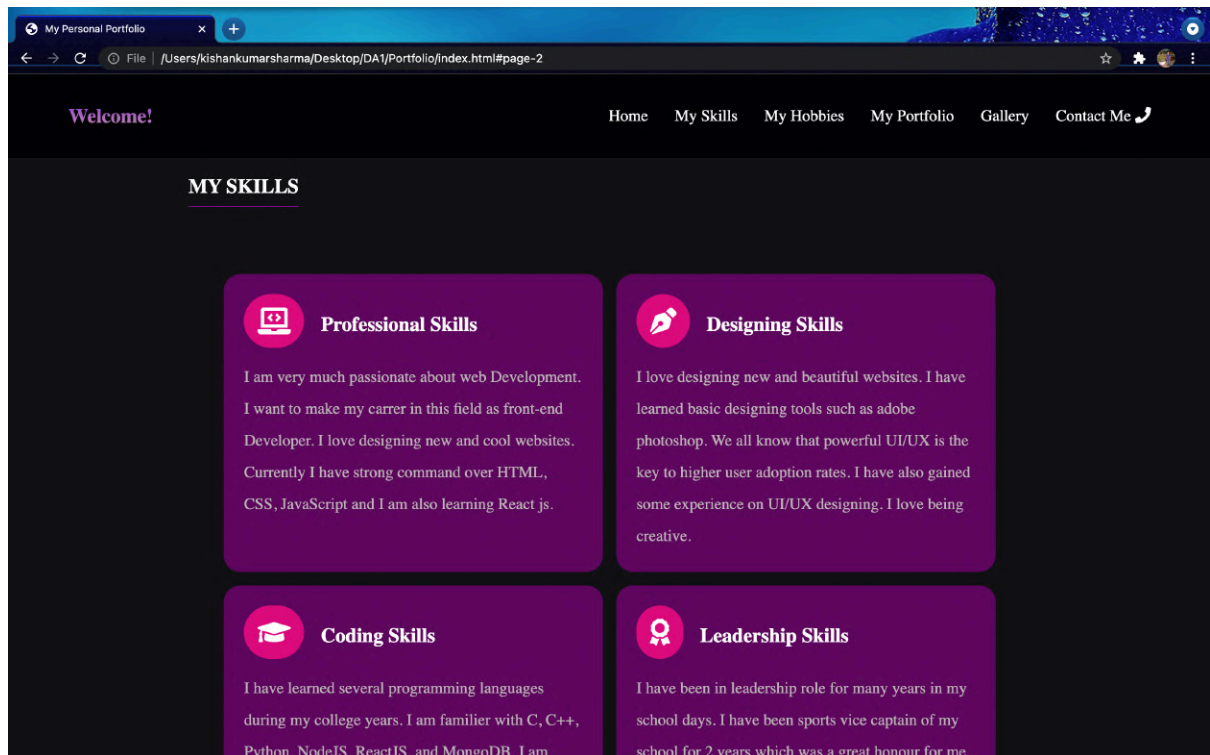

7. We can try to improve always by learning from others mistakes.
8. A single error can ruin whole website, so we need to be very cautious while designing our website.
9. I learned how I can host my own website!!! Which I thought would be very difficult but on GitHub it is super easy to do.
10. I learned never to give up as sometimes I got stuck but with the dedication to learn we can overcome any obstacles.

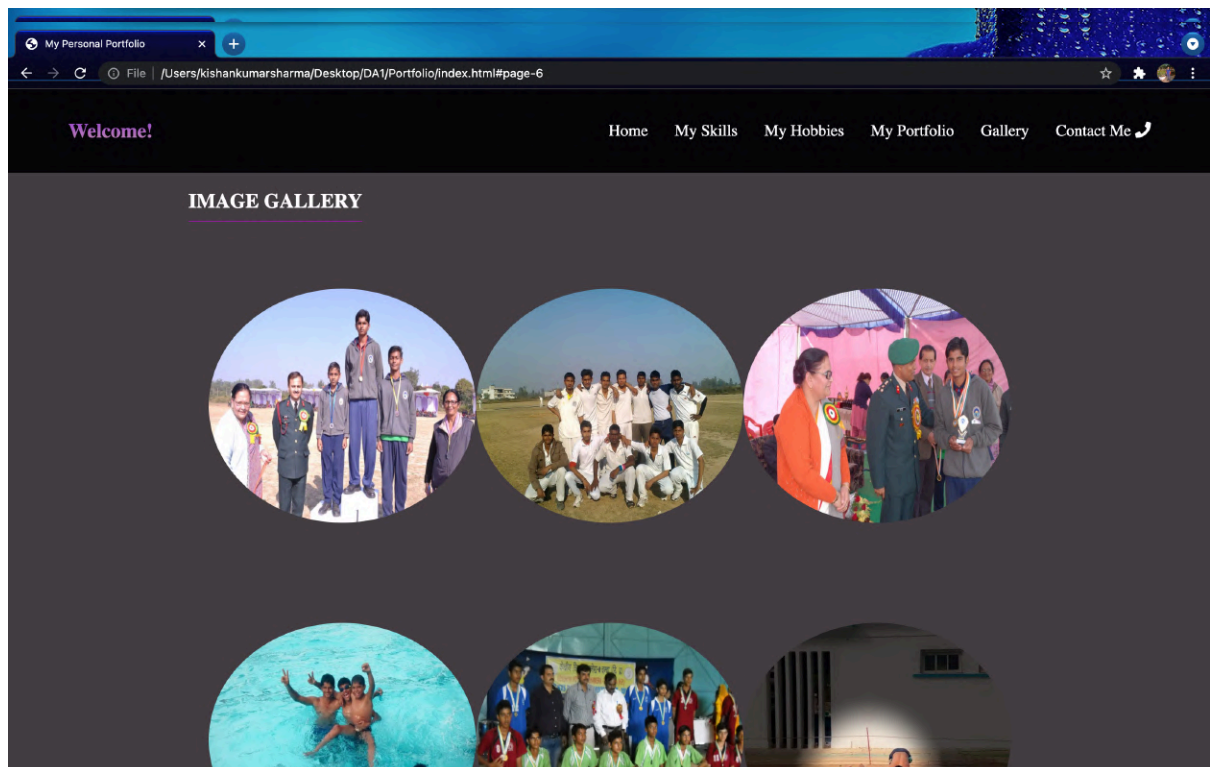

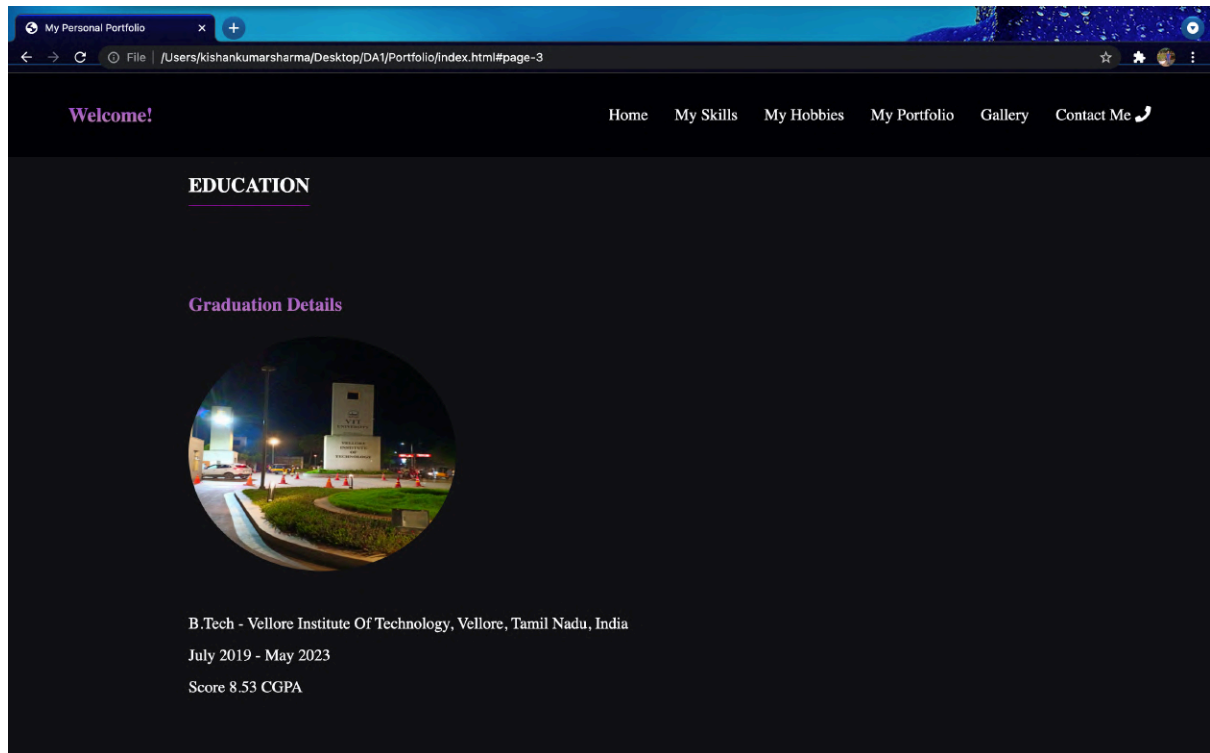

- **Write down why everyone needs a personal webpage.**

1. A personal webpage can help us to find a suitable job as we can describe ourself more nicely through a webpage and people can see and hire us if they like our work.
 2. A personal webpage helps the recruiters to find the suitable candidates more easily. It helps in a mutual way. A recruiter can find a suitable candidate more easily and a candidate can get a job more easily as well. In this way it also saves time and money for everyone.
 3. A personal web page help us to build our relationship with many people, in this we we can improve our reach and it can help us in our career.
 4. A personal website help us to stand out from the competition as not everyone have a personal webpage.
 5. A personal webpage can help to improve our image. It describes our thoughts.
 6. A personal webpage helps anybody to be creative and give us a chance show our talent on our webpage.
 7. A personal webpage is more dynamic than a resume or CV. A webpage can have much more than what is in CV or a resume can accommodate.
 8. Developing a personal webpage helps us to gain new skills.
 9. People can show their personal webpage to their parents, relatives, and friends and make them wow. They may not understand computer science but they can surely understand our personal webpage.
 10. Everyone should have a personal webpage as it is good for our confidence as well.
- Deploy your personal webpage in GitHub pages (Github.io), share your website link, code and Screenshots.

<h4>Professional Skills</h4>
```

```
<p>
```

I am very much passionate about web Development.

I want to make my carrer in this field as front-end Developer.

I love designing new and cool websites. Currently I have strong command over

HTML, CSS, JavaScript and

I am also learning React js.

```

        <h4>Designing Skills</h4>
        <p>
          I love designing new and
beautiful websites. I have learned basic designing tools
          such as adobe photoshop.
We all know that powerful UI/UX is the key to higher user
adoption rates.
          I have also gained some
experience on UI/UX designing. I love
          being creative.
        </p>

            Management in XV6</h4>

```

```

<figure class="project_Image">
  
</figure>
</li>
<span style="padding: 0 0 5rem 0;">xv6
uses 32-bit virtual addresses, resulting in a virtual address
space of 4GB. xv6 uses paging
to manage its memory allocations.
However, xv6 does not do demand paging, so there is no
concept of virtual memory.xv6 uses
a page size of 4KB, and a two level page table structure. The
CPU register CR3
contains a pointer to the page
table of the current running process. The translation from
virtual
to physical addresses is performed
by the MMU as follows. The first 10 bits of a 32-bit virtual
address are used to index into a
page table directory, which points to a page of the inner page
table. The next 10 bits index into
the inner page table to locate the page table entry (PTE). The
PTE contains a 20-bit physical
frame number and flags. Every page table in xv6 has mappings
for user pages as well as kernel
pages. The part of the page table dealing with kernel pages is
the same across all processes.</
span>

```

<li class="project">
  <h4 class="highlightedText">LPG
Gas Detection using Arduino</h4>
  <figure class="project_Image">
    
  </figure>

```

```

        </figure>
    </li>
    <span style="padding: 3rem 0 5rem 0;">LPG gas sensor module is used to detect LPG Gas. When LPG
    gas leakage sensed,
        it will give a HIGH pulse on its
    D0 pin and Arduino constantly reads its D0 pin.
        When Arduino receives a HIGH
    pulse from the LPG Gas sensor module it displays
        the "LPG Gas Leakage Alert"
    message on 16x2 LCD and stimulates buzzer which beeps
        again until the gas detector
    module doesn't recognize the gas in the environment.
        When Arduino gets a LOW pulse
    from the LPG Gas detector module, then LCD will show
        the "No LPG Gas Leakage" alert
    message. Arduino manages the complete process of this
        system like reading LPG Gas
    sensor module output, sending a message to LCD and stimulating
    buzzer.
        We can set the sensitivity of
    this sensor module by inbuilt potentiometer located on it.</

    class="highlightedText">Traffic Light Control System Using
    8086</h4>
        <figure class="project_Image">
            
        </figure>
    </li>
    <span style="padding: 3rem 0 5rem 0;">Traffic light is an optical signalling device that
    indicates different signals related to traffic,

```

rail, naval and pedestrian. It aims at traffic safety. In our project we have designed Traffic light

controller interface module to simulate the function of four way traffic light controller.

Combinations of red, amber and green LED's are provided to indicate Halt, Wait and Go signals for vehicles.

Combination of red and green LED's are provided for pedestrian crossing. 36 LED's are arranged in the form of an intersection.

A typical junction is represented on the PCB with comprehensive legend printing.

At the left corner of each road, a group of five LED's (red, amber and 3 green) are arranged in the form of a T-section to

control the traffic of that road. Each road is named North (N), South(S), East (E) and West (W).

```
<li class="project">
  <h4
class="highlightedText">Restaurant Management System </h4>
  <figure class="project_Image">
    
  </figure>
</li>
<span style="padding: 0 0 5rem 0;">A
restaurant management system (RMS) is an essential tool for
any new restaurant.
```

These systems are designed to keep your restaurant running by tracking employees, inventory and sales. A typical RMS setup usually includes both software and hardware, such as a cash register, barcode scanner and receipt printer, depending on how your

restaurant is organized. Most importantly, an RMS is a comprehensive tool that allows you to see your restaurant and its needs at a glance, which can simplify your workload on a day-to-day basis. A restaurant management system is a type of point-of-sale (POS) software specifically designed for restaurants, bars, food trucks and others in the food service industry. Unlike a POS system, RMS encompasses all back-end needs, such as inventory and staff management.
